

Career Tech Matters

by Dennis Franks • Feb. 3, 2017

A few weeks ago, almost every Pickaway-Ross student received an Asus tablet in our new one-to-one initiative.

It wouldn't have been possible without the help of Tony Eallonardo's Network System Technologies students.

Dana Anderson, who spearheaded the initiative, asked Tony to select students for the team.

"I knew that the students would benefit from an orientation that covered the basics of the hardware and operating system," Dana said. "It was only natural to collaborate with the NST class."

Junior Levi Leslie said he volunteered because he wanted to try something new while junior Kelley Seymour wanted to get hands-on experience.

Nolan Badgley

"It was good teaching your friends how to use them," junior Nolan Badgley said.

Team members had a checklist of what students needed to be taught so that the teaching – and the learning – was uniform.

Over the course of two weeks, the students worked with more than 700 of their peers.

Senior Brendon Johnson made the training into a bit of a game, seeing how many students he could train in a day. At one time, he said, he taught seven students at once.

Dana said she was pleased with the process.

"It was exciting watching the peer interaction between students," she said.

Senior Rachel Walters agreed.

"You learn how to work with other people and get along with others."
